

DIRECTORY IMPLEMENTATION FLOWCHART

Two level Directory

ALGORITHM

STEP FIRST : CREATE A LIST OF DIRECTORIES THAT YOU WANT TO MAINTAIN. YOU CAN DO THIS BY USING THE LS COMMAND TO LIST THE DIRECTORIES IN THE CURRENT DIRECTORY, OR BY SPECIFYING A SPECIFIC PATH TO LIST THE DIRECTORIES IN THAT PATH.

STEP 2 : CREATE A LOOP TO ITERATE THROUGH EACH DIRECTORY IN THE LIST. YOU CAN USE THE FOR LOOP TO DO THIS.

STEP 3 : WITHIN THE LOOP, USE THE CD COMMAND TO CHANGE TO THE CURRENT DIRECTORY, AND THEN USE THE MKDIR COMMAND TO CREATE ANY MISSING DIRECTORIES.

STEP 4 : AFTER CREATING THE MISSING DIRECTORIES, YOU CAN USE THE CHMOD COMMAND TO SET THE APPROPRIATE PERMISSIONS FOR EACH DIRECTORY.

STEP 5 : FINALLY, USE THE CD COMMAND TO RETURN TO THE ORIGINAL DIRECTORY, AND THEN REPEAT THE PROCESS FOR THE NEXT DIRECTORY IN THE LIST.
